Allowable Subject Matter

Claims 1-21 are allowed. The following is a statement of reasons for the indication of allowable subject matter:

Naveh (US 6,411,978) teaches a Fast Fourier Transform (FFT) that makes a decision about scaling down the output data values of the current stage on the basis of the output values of the previous stage. Luo (US 5,481,488) teaches a butterfly processor and overflow detector. The prior art of record fails to teach calculating a number of unnecessary output divisions for each output stage of the FFT system during the second signal transmission, the number of unnecessary output divisions determined from the predicted maximum output signal during a second signal transmission and from the maximum output communication signal sampled during the first signal

transmission and disabling selectively the output stage division for at least one output stage of the FFT system during the second signal transmission using the number of unnecessary output divisions determined in the calculating step.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Naveh et al (US 6,411,978) and Luo et al (US 5,481,488).
